

**FERRARA** 

**WALK-IN RESCUE**

# Walk In Rescue

Ferrara offers the strongest line of rescue apparatus available in the industry. Heavy rescues are available on Ferrara's Inferno, Igniter, Ember, and Intruder 2 custom chassis. Our rescue bodies are available in your choice of state of the art high strength extruded aluminum or 12 gauge 304L stainless steel design.

Each apparatus is engineered to maximize compartment space and storage areas. Custom rescue tool brackets and toolboxes are designed to accommodate the specific equipment and tools being used by a department.

Walk-In rescue interiors are designed to maximize interior and exterior space while providing accommodations for rehabilitation, command center functions, or other specialized applications.

Extended front bumpers serve as more than just a place to mount sirens and horns. Electric and hydraulic winches as well as HRT hose reels and 120/240 volt electrical rewind reels can also be located on the front bumper.

# Command

Ferrara command centers offer many different layouts combining heavy duty construction, new technology, and superior functionality.

## Work Station

Work stations are configured and ready to accept anyone into the network with just a simple plug-in.

## Communications

All new interoperability systems (ACU 1000) allow responders on different frequencies to work together.

## Media Center

Maintain up to date information with video displays, satellite, TV, internet, and camera surveillance.

Slide out room extensions can drastically increase the amount of space inside the vehicle. These extensions slide in and out at the touch of a button.

The latest technology options are available on all command units such as satellite, remote cameras and weather stations.

Emergency response trailers are available as mobile command centers.

# Rehabilitation

Exhaustion and fatigue can become a serious problem for personnel involved with an incident response. Ferrara offers rehabilitation vehicles that are equipped with the environment and tools needed to protect your departments greatest assets.

Rehab features include: HVAC systems, water systems, refrigerator and freezer, full kitchen sink, hot and cold water, full flush toilet, and computer work stations.
